Beej's Guide to Network Programming

Unknown

1. Contents

2. Intro

1. Audience

2. Platform and Compiler

3. Official Homepage and Books For Sale

4. Note for Solaris/SunOS Programmers

5. Note for Windows Programmers

6. Email Policy

7. Mirroring

8. Note for Translators

9. Copyright and Distribution

3. What is a socket?

1. Two Types of Internet Sockets

2. Low Level Nonsense and Network Theory

4. IP Addresses, structs, and Data Munging

1. IP Addresses, versions 4 and 6

1. Subnets

2. Port Numbers

2. Byte Order

3. structs

4. IP Addresses, Part Deux

1. Private (Or Disconnected) Networks

5. Jumping from IPv4 to IPv6

6. System Calls or Bust

that, the

out
of this
uch, you

ng

th email
I can't

guarantee a response. I lead a pretty busy life and there are times when I just can't answer a question you have. When that's the case, I usually just delete the message. It's nothing personal; I just won't ever have the time to give the detailed answer you require.

As a rule, the more complex the question, the less likely I am to respond. If you can narrow down your question before mailing it and be sure to include any pertinent information (like platform, compiler, error messages you're getting, and anything else you think might help me troubleshoot), you're much more likely to get a response. For more pointers, read ESR's document, [How To Ask Questions The Smart Way](#).

If you don't get a response, hack on it some more, try to find the answer, and if it's still elusive, then write me again with the information
